

# BauDoX

The central digital tool for modern construction documentation.

Do you want to record your construction projects digitally and quickly?  
If so, you are in good hands with tedico - we have developed an innovative solution with the new BauDoX.

## Efficient construction site reporting

BauDoX simplifies the reporting of construction progress, construction defects and execution quality. BauDoX replaces time-consuming analog logging with forms on the PC and enables smooth digital reporting directly on the construction site. Take photos, add text, select and mark the project and mark, send, done.

## Monitoring and quality assurance

Our cloud-based platform enables all stakeholders to track the reporting in real time. This enables an immediate response to new challenges in the project or to construction issues.

BauDoX enables an evaluation of the reported work and construction defects. By analyzing the collected data potential for improvement can be identified and the quality of construction work can be continuously optimized.

Digital starts in mind.

### Functional principle of BauDoX

The admin manages the users, projects and labels.  
The users receive their access and password by e-mail.

Users can then use their smartphone to capture images and text, assign them to a project and send them without an additional app. Additional information such as user, date, time and GPS information is added automatically.

Furthermore, each entry can be given a label e.g. completion, problem, defect, etc. This provides a better overview for analysis.

All entries can be displayed centrally in the web portal and can be sorted using the project filter and its labeling. Individual projects can be exported as PDF files and saved locally or sent by e-mail.

### Facts

- simple and digital
- time-saving and cost-effective
- mobile and available worldwide
- secure and transparent

### Target group

- craftsmen and construction companies
- site managers and foremen
- architects and planners
- experts and service providers

Digital starts in mind.
